

ACSIA Enterprise Version

This documents ACSIA Enterprise version, a host based and automated cybersecurity interactive application developed by 4Securitas.

ACSIA Enterprise is designed and tailored for large organizations and it comes with the following features:

- Operating system log analysis
- Application level logs analysis (app logs to be added by user during client side deployment)
- Web traffic log analysis
- Malicious network scan analysis
- SQL Injection analysis
- BotNet analysis
- Account compromise analysis
- Brute-Force analysis
- XSS and sub-exploitation technique analysis
- Parallel deployment on client enrolments and removals
- Email and Slack integration for alert notifications
- Auto mitigation of well-known attack types (i.e. botnet, sql injection, xss, attack, etc)
- Linux docker containers monitoring - fully docker-aware
- Kernel level anomalies and attacks detection
- Internal user activity analysis aka UBA
- Exploitation and 0-day analysis
- Trojan, webshell and rootkit analysis
- Privilege escalation analysis
- Eavesdropping and information gathering analysis
- File integrity check and analysis
- User session player
- Supports 100+ client servers

Platform supported:

ACSIA supports Linux systems predominantly but it also has windows implementation as clients to be connected and the details provided within user administration and installation guide.

Support:

We operate in continuous development mode, our product is continually updated so that all users can benefit from the latest improvements and upgrades.

Our team is available to support our Enterprise Clients, with full multi-lingual support from our headquarters in Dublin, the Silicon Valley of Europe.

Licensing:

Our software is sold on a 1 year/annual renewable licence. Full support for 1 year is included. With an active community, free documentation and plenty of video training and educational courses available, 4Securitas.com offers resources to help you make the most of your ACSIA licence.

For anything else

Visit <https://acsia.io> main site for details and pricing, the main blog where we publish some use cases at <https://blog.acsia.io> and the media web site <https://media.acsia.io> where you can find some videos introducing ACSIA. We also have a dedicated GDPR portal at <https://securegdpr.tech>
