

## ACSIA Enterprise Version

This documents ACSIA Enterprise edition, a host based and automated cybersecurity interactive application developed by 4Securitas.

ACSIA is a real-time cyberdefense application that monitors and protects critical servers and notifies and alerts users and administrators of threats and anomalous activity.

**ACSIA Enterprise is designed and tailored for mid-large and large organizations server infrastructure and includes wider area of cybersecurity.**

### Some of the areas ACSIA Enterprise covers are:

- System level attacks threat detection
- Application level threat detection
- Malicious tools detection and identification
- BotNet detection
- SQL Injection detection
- Code Injection detection
- Brute-force detection
- XSS attack detection (Type-0, Reflected and Stored)
- CSRF detection
- LFI - File inclusion detection
- Malware detection (trojan, webshell, rootkit, etc.)
- Eavesdropping and information gathering detection
- Portscan detection (invasive only)
- Portscan detection
- Potential account compromises (geo-location based)
- Potential account compromises (UEBA)
- Linux container support (threat detection)
- User activity and session player within the notification
- Internal user and entity activity analysis (UEBA)
- Exploitation and 0-day detection
- Privilege escalation detection
- File integrity check
- Kernel level threat detection (Linux systems and containers)

- Automated cyber attack event handling and remediation
- Incident Response
- Advanced persistent threats detection
- Indicator of Compromises alerting
- Support for unlimited number of server
- Support for custom application based threat detection
- Email and Slack integration for notification
- Parallel clients deployment and connection
- Supports 100+ client servers

**Platform supported:**

ACSIA supports Linux server systems predominantly but it also has windows server implementation as clients to be connected and the details provided within user administration and installation guide.

**Support:**

We operate in continuous development mode, our product is continually updated so that all users can benefit from the latest improvements and upgrades.

Our team is available to support our Enterprise Clients, with full multi-lingual support from our headquarters in Dublin, the Silicon Valley of Europe.

**Licensing:**

Our software is sold on a 1 year/annual renewable licence. Full support for 1 year is included. With an active community, free documentation and plenty of video training and educational courses available, 4Securitas.com offers resources to help you make the most of your ACSIA licence.

**For anything else**
